

Native Grass Seeds

Slender Wheatgrass

Elymus trachycaulus

- somewhat drought tolerant
- can withstand 21-63 days flooding
- widely used for revegetation

Percy Folkard 2013

Fringed Brome

Bromus ciliatus L.

- effective for erosion control
- seeds provide food for small mammals and birds

Sloughgrass

Beckmannia

- grows in wet meadows and along pond edges
- used in erosion control and land reclamation

Fowl Bluegrass

Poa palustris

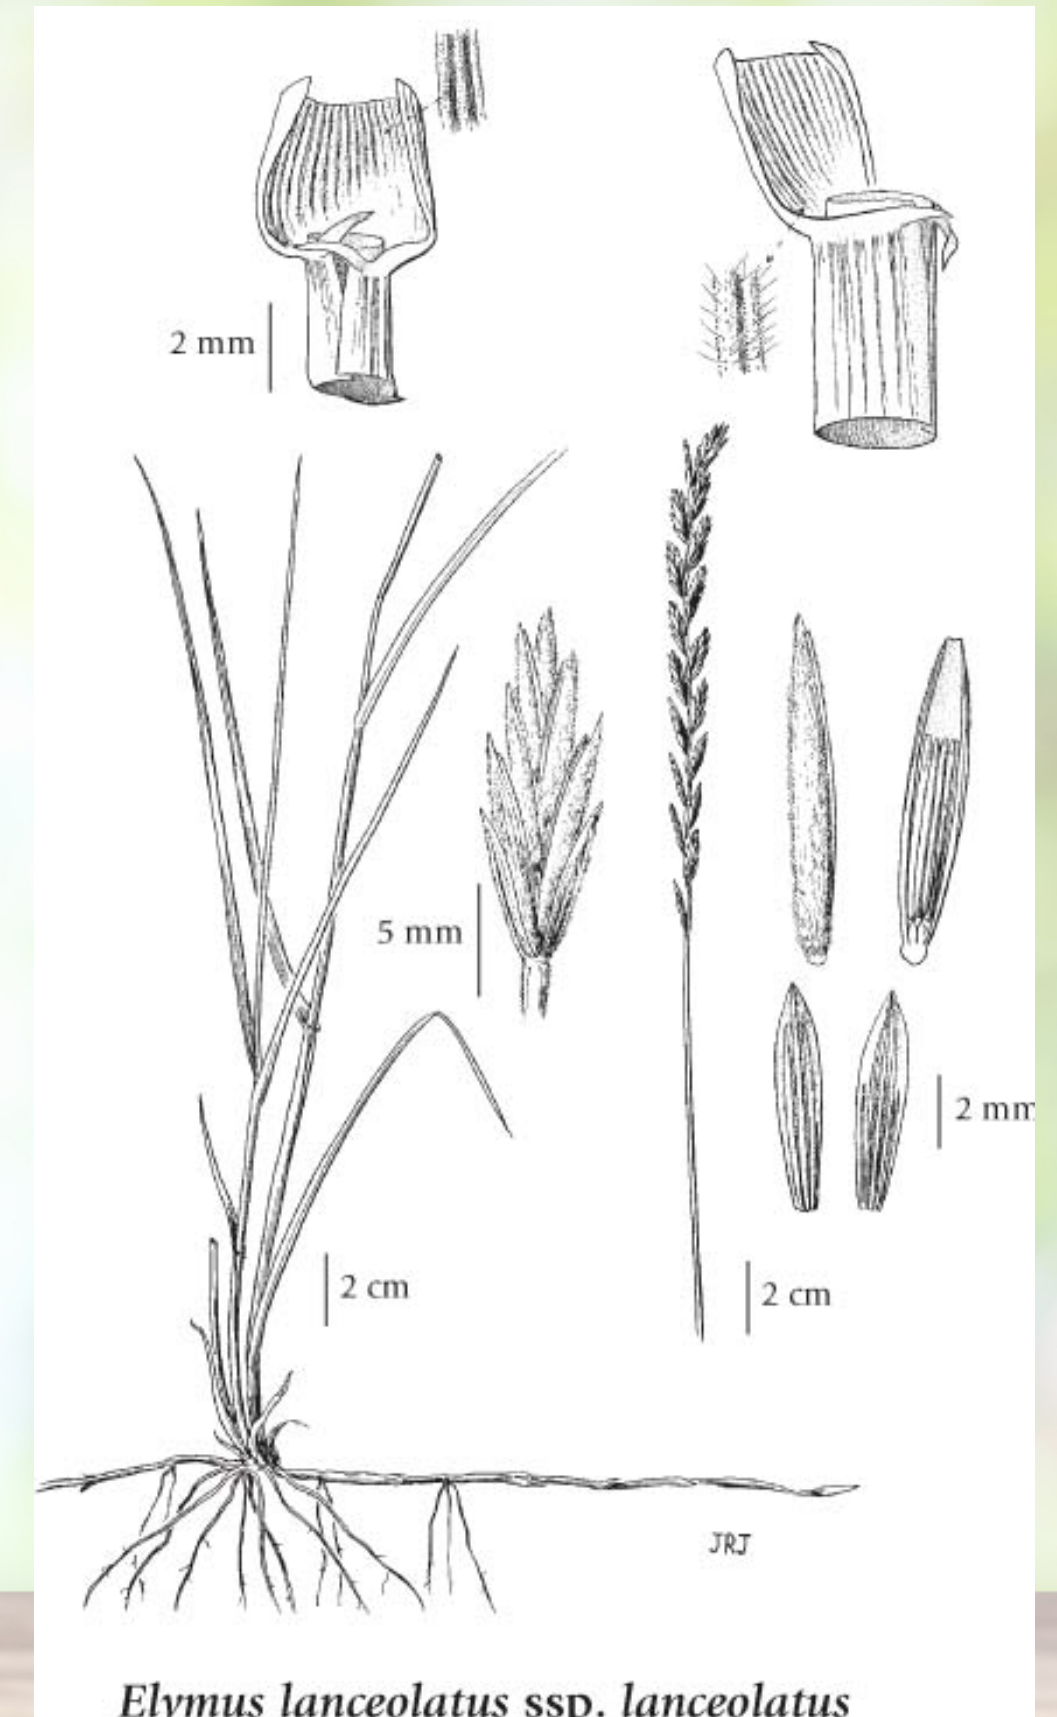

- grows in wet meadows and riparian sites
- used for erosion control and revegetation

Streambank Wheatgrass

Elymus lanceolatus subsp. *riparius*

- drought tolerant
- used for stabilization of disturbed soils

Elymus lanceolatus ssp. *lanceolatus*

Northern Wheatgrass (Thickspike Wheatgrass)

Elymus lanceolatus

- food for deer in spring
- used for stabilization of disturbed soils

Junegrass

Koeleria macrantha

- food for deer in spring
- used for stabilization of disturbed soils

Tufted Hairgrass

Deschampsia cespitosa (L.) P. Beauv.

- well suited to moist meadows
- used for shoreline stabilization and revegetation
